

It only takes
just 10 seconds
to build a
software app.

But it takes
at least 24 hours
to fabricate a
3D Model.

Resurtech

PROMPT TO 3D PRINT IN MINUTES

The Problem

Hardware teams **waste immense time and materials.**

CAD takes months to learn.

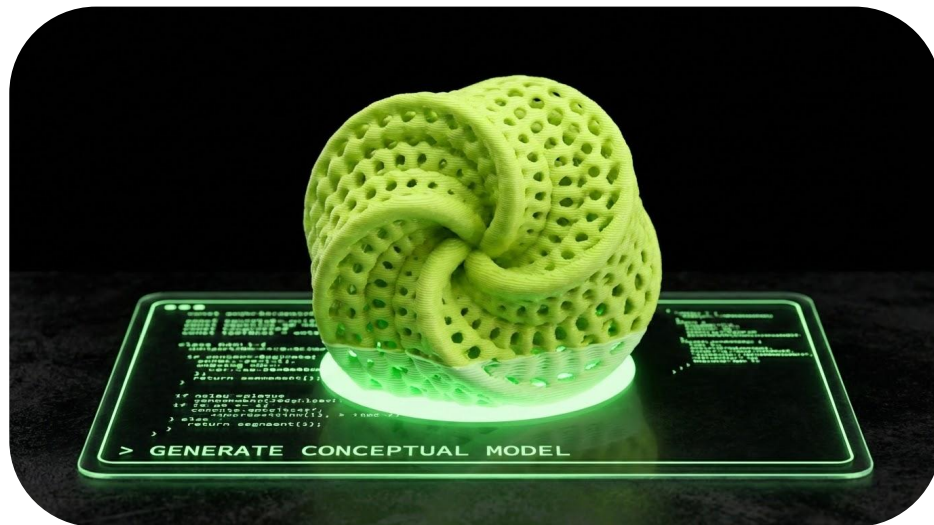

Current AI generates incomplete or unprintable files.

How are we going to solve it?

Solution : Resurtech Studio

Resurtech Studio uses AI to turn text into print-ready 3D files, intelligently calculating materials to eliminate waste.

What makes us different?

Prompt-to-STL

1

Print-ready 3D engineering files generated in minutes.

Localized Prompt Editing

2

Highlight any section and adjust dimensions instantly via text.

Conscience Calculator

3

Calculates exact filament usage before printing to ensure minimal waste.

3D File Type Converter

4

Auto-scales and converts models into any printer-ready format.

Multilingual Prompting

5

Users can choose to prompt in their own language.

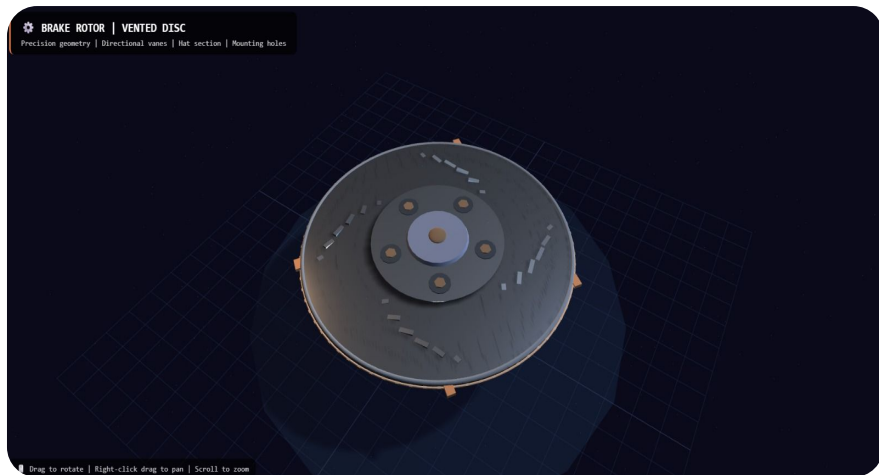

Core features

What are we building?

Prototype

Prompt 1:
"Create a brake rotor"

Prompt 2:
"Create a holder for IMU sensor"

Why does it have to be us?

Proof Of Concept

- **Social Partnership:** Building a custom prosthetic for Abdo, a local amputee.
- **The Validation:** Proving instant, eco-friendly 3D parts generation.
- **The Impact:** A flagship case study demonstrating real-world value.

What do the numbers say?

Market Size

TAM

TOTAL
ADDRESSABLE MARKET

\$35B

The Global 3D Printing &
CAD Software Market
(Growing at 18% CAGR).

SAM

SERVICEABLE
ADDRESSABLE MARKET

\$3.3B

Targeting the AI Rapid
Prototyping sector
(~9.5% of TAM)

SOM

SERVICEABLE
OBTAINABLE MARKET

\$33M

Capturing 1% via GCC
Makers & Academic R&D
(~1% of SAM)

The Competition

Feature / Capability	 Resurtech	PrintPal.io	3D AI Studio	Zoo.dev
Output Type Slicable STL/ CAD file			 3D Meshes	 Enterprise Code/CAD
Localized Prompt Editing	 (Section mapping)	 (Requires full regen)	 (Requires full regen)	 (Code-based)
Eco Conscience Calculator	 (Density/Cost check)			
Target User	Hardware R&D & Students	Software/Hardware Devs	Hobbyists & Makers	Enterprise Engineers
Physical Fulfillment	Scalable to local & GCC delivery			

Resurtech

Competition

Business Model

A land-and-expand strategy, capturing grassroots users and monetizing B2B R&D.

Free

For Students & Hobbyists

Basic STL generation to drive massive user acquisition.

Pro

Subscription or
Pay as you go

Professionals & Hardware Devs

Prompt-based editing and local physical fulfillment.

In app extensions.

Enterprise

R&D & Universities

CAD APIs, ESG waste tracking, and priority print fulfillment.

How do we grow?

Go-To-Market

FREE

Basic STL · top of funnel

PRO

Pay-per-token · priority

Token-based freemium. Local traction first, global next.

PHASE 1

Hyper-Local

EN · AR

- GCC maker communities
- B2B hardware pilots
- Local University workshops

PHASE 2

Scale up

DE · FR · ES · RU

- More languages
- Low engineering cost
- Open-source architecture

PHASE 3

Asia Markets

ZH · JA · KO · HI

- Deep localization
- Post-funding rollout
- Manufacturing hubs
